STONS SOA & Connectivity solution based on IBM Websphere enables dynamic, interconnected business processes, and delivers highly effective application infrastructures for all business situations. Our solution efficiently deliver applications and services with robust performance and maximum security and control while optimizing costs.

STONS SOA & Connectivity is built from two main and important areas Connectivity and Business Process Management (BPM)

Second TO None Connectivity

STONS SOA & Connectivity enables an agile and cost-optimized business by ensuring applications, facing challenging, unpredictable demand levels, consistently deliver key business results even in the face of budget challenges.

By using our solution you can expect these benefits :

- Speed delivery of reliable new applications and services with operational efficiency and flexibility
- Drive down management and administration costs by adopting easy-to-use cloud and virtualization technologies
- Reduce costs and risks by efficiently managing your applications with integrated tools that provide maximum security and control
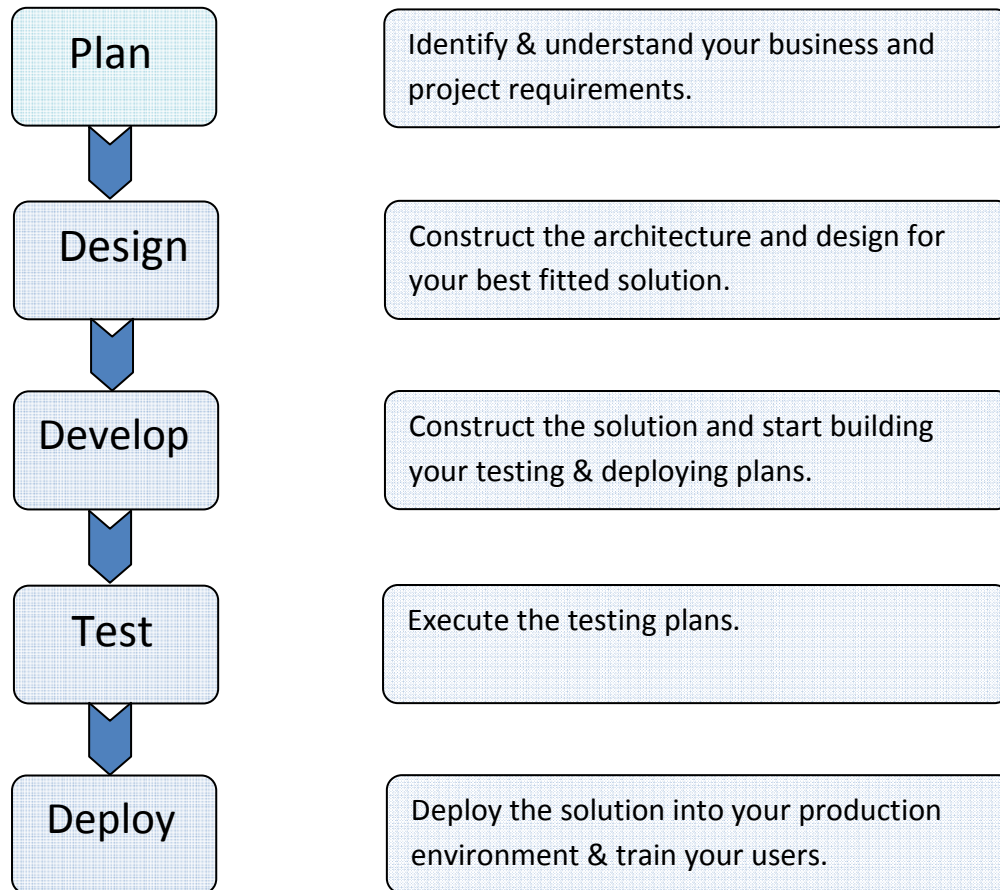

Second TO None Business Process Management

STONS SOA & Connectivity empowers organizations of all sizes to not only meet but exceed their customers' expectations, not only react to, but anticipate shifts in their marketplace, and all of this while keeping costs under control. It takes a process aware organization to achieve this level of agility and we have both the tools and the know-how to transform you into one.

By using our solution you can expect these benefits :

- Deliver complete visibility to all process participants for greater collaboration and continuous process improvement
- Increase efficiency with a federated view for performing tasks, managing work items, tracking performance and responding to events—all in real time
- Empower knowledge workers with real-time analytics to improve business processes
- Enhance time-to-value through business-user focused design capabilities, including process coaching to guide users easily through the steps of a process

Confidently manage change with a unified model-driven environment that gives everybody visibility of the same process version

STONS
second to none solutions

STONS proven methodology is built on the following stages:

Stage	Description
Plan	Identify & understand your business and project requirements.
Design	Construct the architecture and design for your best fitted solution.
Develop	Construct the solution and start building your testing & deploying plans.
Test	Execute the testing plans.
Deploy	Deploy the solution into your production environment & train your users.
